

Detailed data related to 8,173 individuals' migration histories, recording a total of 18,252 movements. The data was collected in 24 villages in Congo's Buhavu chiefdom in 2012. Updated versions of the dataset may be posted at a later date. Project information can be found at: www.petervanderwindt.com. The PI can only provide limited support to users. Any comments or errors, please send an email: petervanderwindt@nyu.edu. In this document you find a brief description of the files.

All identifiable information has been purposefully kept out of the public versions of the datasets. This data includes, village and individual names and GPS locations.

The data collection was funded by: Columbia's Advanced Consortium on Cooperation, Conflict, and Complexity and Massimo Morelli.

MIG2012_protocol_FR.pdf

- Provides a guide to enumerators for the activities undertaken in the 24 villages.
- In French

MIG2012_dwelling_survey_FR.pdf

- The survey to be filled out for each dwelling.
- In French

MIG2012_village_survey_FR.pdf

- Village survey
- In French

MIG2012_dataset_information.pdf

- All datasets are in .dta format and have informative labels. However, this document provides additional information.
- In English.

There are four datasets. They contain the same information. However, to aid the user we provide them at different units: a dwelling can consist out of multiple households, a household often consists out of multiple individuals, and an individual often makes multiple migration movements.

MIG2012_DATA_dwelling.dta

- Unit of analysis: Dwelling
- Number of observations: 3,628 dwellings
- Identifying variables: IDV (for unique village) and IDD (for unique dwelling)

MIG2012_DATA_household.dta

- Unit of analysis: Household
- Number of observations: 4,000 households
- Identifying variables: IDV, IDD, IDH (for unique household)

MIG2012_DATA_individual.dta

- Unit of analysis: Individual

- Number of observations: 8,173 individuals
- Identifying variables: IDV, IDD, IDH, IDI (for unique individual)

MIG2012_DATA_movement.dta

- Unit of analysis: Movements
- Number of observations: 18,252 movements
- Identifying variables: IDV, IDD, IDH, IDI, IDM (for unique movement)
